Counties Vulnerable to Outbreaks of HIV and Hepatitis C Due to Injection Drug Use

Counties vulnerable to outbreaks of HIV and hepatitis C

Following a 2015 HIV and hepatitis C (HCV) outbreak among persons who inject drugs (PWID) in Austin, Indiana, that resulted in nearly 200 new HIV cases, the Centers for Disease Control and Prevention (CDC) looked into the leading causes of that outbreak. Based on a variety of factors, the CDC identified 220 counties across 26 states where PWID are especially vulnerable to outbreaks of HIV and HCV.
